- **Test Automation & Development Tools:** WebdriverIO, Node.js, GitHub, GitHub Actions, VS Code.
- **Software Quality:** Functional testing, debugging, defect troubleshooting, release validation, cross-device testing, data validation.
- **Development Practices:** Familiarity with Agile and Scrum practices.
- **Security:** CompTIA Security+, access controls, MFA, vulnerability awareness.

Work Experience

Information Technology Specialist

Source 4 Industries | Las Vegas, Nevada | April 2022 - Present

- Manage the company's **production Shopify website** and handle updates from development through deployment.
- Build and maintain website features using **JavaScript, HTML, CSS, and Shopify Liquid**, including vendor-based logic that automatically displays a promotional product badge.
- Review support requests, clarify requirements with stakeholders, and **reproduce reported website issues** before making changes.
- Build and test fixes in a **duplicate theme and preview environment**, then verify functionality again after release.
- Helped lead the migration to a newer Shopify theme and completed **extensive QA testing across customer workflows, desktop, and mobile devices**.
- Built a **Python automation tool** that compares monthly Excel transaction files, saving the accounting team **hours of manual reconciliation work each month**.

Information Technology Student

BYU-Idaho | Rexburg, Idaho | January 2019 - July 2022

Designed and developed **web applications and software programs** using **JavaScript, Java, HTML, and CSS**, while completing database coursework and testing, debugging, and troubleshooting code.
